

InSight

SkyBitz InSight solutions.
Fleet efficiency at your fingertips.

Cargo

SkyBitz InSight Solutions allow you to manage your fleet more effectively than ever before.

Efficient

An efficient fleet is one that uses information on trailer location and cargo status to increase revenues.

Cargo

The SkyBitz Global Locating System (GLS) InSight Cargo Solution delivers visibility of trailer and cargo status via satellite throughout North America.

Solution

SkyBitz InSight Cargo helps you improve operational efficiency by delivering total visibility of your trailers and a complete status of your cargo.

SkyBitz InSight Cargo. Keeping your trailers and their cargo visible.

SkyBitz InSight Cargo is the most complete and advanced trailer tracking and monitoring solution available.

InSight Cargo allows you to improve fleet efficiency and reduce unauthorized use of your trailers by delivering total visibility of your trailers and a complete status of your cargo.

In addition to the trailer location tracking, InSight Cargo allows you to determine whether a trailer is empty or loaded so you can maximize trailer utilization, improve tractor to trailer ratios and manage trailer detention. For added peace of mind you can also choose an optional Door Sensor which allows you to monitor door open events.

When the Cargo or Door Sensors alert you to a change in status you can get this security message sent via email to your computer, pager, or cell phone. You decide what works best for you.

Availability

The SkyBitz InSight Cargo Solution is available today. Please contact your SkyBitz sales representative at 1-877-2SkyBitz (1-877-275-9248).

Package Components

Standard

1. Mobile Terminal
2. Mobile Terminal Mounting Bracket
3. Cargo Sensor
4. Cargo Sensor Mounting Bracket
5. Mobile Terminal Interface Module (MTIM)
6. Installation Kit

Options

7. Door Sensor
8. Auxiliary Battery Pack

Features and Benefits

Cargo Status:

Maximize trailer turn times and manage detention by monitoring whether a trailer is empty / not empty. You can also monitor load security with the SkyBitz Cargo solution. When the Cargo or Door Sensors alerts you to a change in status you can get this security message sent via email to your computer, pager, or cell phone.

SkyBitz Customer InSight Web Application:

Gain total visibility and control of your fleet through the secure SkyBitz Customer InSight web application. There is no complex integration or software installation. You just log in and begin increasing your operational efficiencies.

Asset Locator:

The Asset Locator gives you the ability to look for your trailers in a way that best suits your needs. You can monitor your assets by ID Number, Group or by Location. Perform an Asset Based Search to find all individual trailers by your defined ID or by the group you've assigned them to. Or perform the Location Based Search to find all trailers within a specified distance from latitude/longitude, a city/town or from a landmark that you define.

Location Mapping:

Map the most recent position or historical positions of single or multiple trailers for more controlled fleet management.

Panic Operations:

Emergency or potential threat situations require that you have the ability to track an asset in near real time in order to intercept or recover it. The SkyBitz Panic Operation allows you to send a temporary priority reporting assignment from Customer InSight to any Mobile Terminal to have it report its position every three minutes for a specified period of time that you determine.

Dwell Time and Status Report:

Identifying trailers that have not been transporting loads for an unusually long period of time is crucial to your operating efficiency. With the SkyBitz Dwell Time/Status Report you determine exactly how long a trailer or group of trailers has been idle.

Address Lookups:

Sending drivers to find an empty trailer without knowing the exact location is both frustrating and time consuming. With the Address Lookup feature you can get the exact address for each one of your trailers and eliminate wasted trips.

Paging:

Certain trailers carrying high value cargo may have additional contact requirements. With SkyBitz, you can Page a Mobile Terminal to check for a change in location or sensor status. Since the communication with the Mobile Terminal is two-way, messages can be sent to and from the Mobile Terminal to give you total visibility to your fleet.

Email Alerts:

When you really need to know about a status change of a trailer you can receive SkyBitz Position and Event Data in real time to a customer-specified email address. Or you can retrieve high-priority messages through your desktop, cell phone or pager.

Information Exchange:

Customize the way you view the information about your assets to match the needs of your fleet on the personalized SkyBitz Customer InSight web application and create your very own MySkyBitz section. Or integrate your SkyBitz data directly into your trailer tracking system via XML. You can also download reports into existing tables or Excel spreadsheets for sorting and data mining.
