

Key Features

- Heartbeat – reports location even when ignition is turned off
- Rugged, weatherproof enclosure
- Easy installation
- Coverage includes U.S. and Canada

GPS Tracking Solution

With the SkyBitz DT3000 you can easily and cost-effectively track, monitor and manage your heavy equipment. Whether you rent or own your equipment, knowing where your assets are, and how long a piece of equipment has been running can help your business reduce downtime and complete more jobs.

The SkyBitz DT3000 heavy equipment tracker comes in a weatherproof, ruggedized enclosure with an optional sensor to monitor specific events like PTO (power take off), motors, and pumps.

With the DT3000, you can control fuel costs due to excess idling and increase profits through improved control of company assets. The SkyBitz DT3000 is ideal for equipment such as:

- Bulldozers
- Backhoes
- Skid Steers
- Cranes
- Excavators
- Loaders
- Cement Mixers

The SkyBitz Local Fleets platform allows you to monitor your heavy equipment, vehicles, trailers and assets all in one easy-to-use web application without any software downloads.

Temperature Tracking

Transporting perishables presents two challenges for a fleet owner: get it there on time and keep it fresh. In order to accomplish this, temperature tracking for your refrigerated fleet is necessary. Drivers cannot always be relied upon to accurately monitor the temperature of the compartments. Temperature monitoring gives fleet owners another safety net to protect cargo while it is being transported. The DT3000 with the Temperature Sensor, allows you to set alerts to notify you of any temperature changes by setting a desired range. Monitor all door openings, as well as unscheduled or unauthorized openings. This will help prevent spoilage as well as alert you to possible theft or unauthorized access.

The Benefits of Heavy Equipment Tracking

Vital among construction companies, the DT3000 helps locate heavy equipment, provides hourly updates, and records engine hours for maintenance scheduling. You receive alerts for multiple events including theft and off-hours operation. By measuring equipment activity using engine hours, you may schedule maintenance checks and service points without the need to track hours of operation manually.

Additional benefits include:

- Theft reduction.
- Ability to quickly locate and recover equipment if theft occurs.
- Track billable hours in use.
- Automatic engine hour reporting.
- Pinpoint exactly when someone turns the equipment ignition on/off.
- Alerts to your cell phone for theft, unauthorized movement, arrival, ignition, etc.

SkyBitz Keeps a Close Eye On Your Assets

While you're focusing on your business, SkyBitz is gathering location and PTO data and crunching the numbers. We make it easy to create usage reports so you can identify trends in your operations—because we know accurate data is key to making decisions that increase your business's profitability.

Constant Monitoring of Refrigerated Compartments

The DT3000 with the Temperature Sensor provides constant monitoring of refrigerated compartments. Multiple temperature-setting alerts can be provided even if the unit is stationary. Every update includes the inside temperature of the refrigerated compartment. Additional alerts are available for things such as door open/close status and motor on/off status.

Specifications

PHYSICAL

Dimensions (L x W x H): 6.75 in x 3.5 in x 1.5 in with Enclosure
(171.45 mm x 88.9 mm x 38.1 mm)

PERFORMANCE

Operating Voltage: 12-24V. A step-down converter will be required for 36 volt equipment.

ENVIRONMENTAL

Operating Temperature: -40°C to 70°C
Dust/Water Ingress Protection IP67

CERTIFICATIONS

PTCRB Certified
