

Key Features & Benefits

- Optimize your workload management
- Delivers fleet tracking data so you know where your vehicles are all the time
- Make sure no driver is overworked or underutilized
- Make paperwork disappear
- Keep detailed records of fleet activity and diagnostics
- Time zone and daylight savings management
- Get easy-to-create documentation for Driver-Vehicle Inspection Reports (DVIR)
- Access records instantly — from any device, anywhere
- Driver video training
- Enjoy fast and easy installation

The Department of Transportation’s Federal Motor Carrier Safety Administration (FMCSA) imposes strict hours of service regulations on drivers who operate commercial motor vehicles to ensure they are alert and able to drive safely. Keeping up with these regulations while running your business can be daunting, so the SkyBitz ELD solution is here to track Hours-of-Service (HOS) for you and keep your fleet compliant while operating more safely and efficiently. And unlike solutions that only provide ELD and DVIR, SkyBitz also delivers fleet tracking and management information critical to running an efficient business.

Meet the Mandate with SkyBitz E-Logs.

Avoid Hours-of-Service violations with an FMCSA certified ELD solution from SkyBitz. The solution helps fleet managers and drivers become compliant with the HOS mandate through automatic creation and storage of driver records.

With easy-to-use software by SkyBitz, moving from paper logs to electronic logs is painless. Its native Android application has an intuitive driver interface with a guided workflow. The app comes preloaded on a removable, mountable tablet with a large color touchscreen.

Automate Your Fleet’s Compliance.

Electronic logs monitor your fleet for HOS violations so you can’t lose track. E-logs give you a more accurate record of how long your drivers have been spending on the road—in addition to the GPS fleet tracking technology that lets you know where they’ve gone. SkyBitz optimizes the process of keeping driver logs and makes the paperwork disappear. Additionally, fear of audits is eliminated because all of the information required is quickly and easily available.

ELDs Improve Road Safety.

SkyBitz ELDs will help prevent fatigued drivers from getting behind the wheel, therefore reducing accidents caused by exhaustion. Reduced paperwork and better driver utilization helps keep drivers compliant and less likely to have accidents.

Empower Your Drivers with ELD.

SkyBitz knows that if the driver feels confident in using the ELD software, this will translate to fewer violations and better reporting accuracy. That is why the SkyBitz ELD solution is easy to use and driver friendly. The solution features:

- Guided driver workflow
- Color oriented driver hours availability graph

Plus with SkyBitz, the driver knows how many hours are available to them before they sign On Duty.

ELD Reports for Efficient Management Include:

HOS Availability Report: Know which drivers to dispatch and when with real-time hours availability.

Log Report: Review each driver’s individual log, make edits and print multiple logs.

HOS Violation Report: See any and all violations. Violations can be sorted by type to show safety personnel which violation occurrence is happening most often. Identify where additional driver training may be necessary.

Conflicts Report: Identify omissions and inconsistencies in a driver’s log and resolve them to prevent violations.

Missing Miles Report: Identify miles where no driver was logged in and resolve them to prevent violations.

Exceptions Report: See which drivers are taking exceptions to ensure drivers are taking appropriate exceptions.

Improve Workload Management.

With SkyBitz' ELD solution, not only will your drivers be compliant but dispatchers and operations managers will have Hours-of-Service data in real-time which will assist in making critical decisions. SkyBitz ensures that no one is underutilized and no one is over-scheduled. Complying with HOS regulations is easier when you can improve your scheduling and make the most of the hours your fleet is allowed to spend on the road.

Keep Your Vehicles Road-Worthy with Electronic DVIR.

Carriers are responsible for ensuring that their vehicles and equipment are roadworthy. With SkyBitz Driver-Vehicle Inspection Reports (DVIR), pre-trip and post-trip inspections can be completed quickly and easily. SkyBitz DVIR features:

- DVIR integrated in the driver's workflow, so no "forgetting" to do it.
- Extensive default inspection checklist that is also fully customizable.
- Asset Utilization Report based on DVIR which enables better decisions regarding when and where to schedule routine maintenance.
- Inspection Report, useable by mechanics to see what needs to be repaired, with the ability to update what has been repaired. The mechanics' repair information is provided to the driver in the next pre-trip inspection.

Powered by a Proven Platform.

The SkyBitz ELD solution is powered by eFleetSuite, ISE Fleet Services' commercial grade compliance application. By partnering with ISE Fleet Services, the SkyBitz ELD solution leverages decades of transportation technology expertise and a configurable end-to-end solution to manage drivers' hours-of-service and vehicle maintenance compliance, which results in running a safer, more profitable operation.

GPS Fleet Management Included.

Beyond a solution for compliance, SkyBitz delivers the activity and GPS tracking features businesses need. SkyBitz provides full visibility of your vehicles, drivers and assets to help improve productivity and the bottom line. Fleet operators can easily get visibility into vehicle location, fuel usage, speed and mileage through real-time automated reporting.
