

Mag Mount SMARTank
Prophet Propane Tank Monitor

Hall-Effect Sensor
and Dial Gauge

Key Features

- Provides propane tank information for level, location, and efficient route planning. Device operates on 3G/4G cellular networks.
- Eliminate propane run-outs and costly emergency deliveries.
- Access to propane tank information 24/7, from any connected device via the SMARTank Tank Level and Analytics Portal. Mobile app also available.
- Delivery Efficiency Report tracks & calculates potential cost savings.
- Alerts and notification emails sent to your desk or in the field via mobile.
- SMARTank enables asset visibility five different ways, including via GPS.
- Delivery/routing data can be exported to Excel for your routing package.
- Email alerts: Critical low, critical, high, short-fill detection, with criteria that you set.

The Questions are Many. The Answer is SkyBitz.

Are distribution costs up or down? Are you delivering propane when you don't really need to, driving fuel and driver labor costs up in the process? Is your Fill Efficiency getting better over time or worse? Are you over servicing your tanks and burning margin dollars? Do you want to expand your business without adding vehicles and drivers? Would you like to reduce your cost to deliver by 20-30 percent and put that money on the bottom line?

Knowing the answer to these questions directly impacts your profitability, and the data we provide gives you the ability to know and predict, not guess.

SkyBitz has been helping propane producers, marketers and distributors optimize their operating efficiency through remote tank monitoring and gain maximum control over propane distribution and overall vessel management through data collection and analysis.

Propane businesses across the U.S. and Canada are tying cost reductions of 20-30 percent directly to our tank monitoring solutions and the data we provide.

Business as Usual Isn't.

The old days of making a milk run to deliver propane can be very inefficient and costly, in terms of fuel, fleet utilization and maintenance, and driver labor. You don't want to roll that truck any more than you really need to, and you sure don't want that truck coming back anything more than empty.

SkyBitz understands the propane distribution market and its unique storage and distribution requirements. With the proven single-source propane-specific wireless hardware and data delivery solution we provide, you can be confident of the storage, handling, replenishment and delivery decisions you make.

You'll have the data, historical usage, alerts and notifications, and precise tank locating ability to know, not guess, when to roll that truck and with how much product.

State of the Art Technology and Low Cost Cellular Data Transmission.

Our wireless propane telemetry units operate on 3G/4G cellular networks, and are perfect for propane applications, interfacing with the float-type sensor and remote-ready dial face to provide accurate level information. The device then communicates with our Communications Center via cellular networks, and tank data flows to your desktop or mobile device via the SMARTank Tank Level and Analytics Portal.

Join Hundreds of Companies with Proven Results.

Our tank monitoring solutions have a proven impact on profitability. They provide clear financial and operational benefits through capital and operating expense savings and efficiency improvements. The technology also provides powerful information tools that help system users improve customer service, attract new revenue and compete more effectively.
